OPTIMAL HIGH DENSITY STORAGE

Veterans
Administration

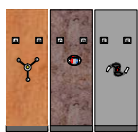

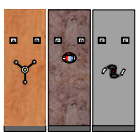

Dallas, Texas

The nature of any hospital's Radiology X-Ray File distribution is not only critical to health delivery systems but to overall patient care. By putting X-Ray Files on the High Density System, the VA Radiology Department was able to reduce floor space requirements and at the same time increase thru-put.

The electronic controls coupled with redundant safeties results in a seamless interface that allows access with a simple push of only one button.

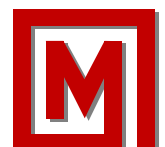

The aisle lighting system puts directed light on the opened aisle. This increases activity efficiencies as well as reduces the operational cost of the area.
